11.3. Individual opposition	5
11.4. Database isolation	5
12. Contact and exercise of rights	6

1. Identity of the data controller

Charles Bentley, hereinafter “the Operator”, is the data controller for personal data collected through the Summary AI bot within the meaning of Regulation (EU) 2016/679 (“GDPR”).

- E-mail: **charlesbentleypro@gmail.com**
- Dedicated GDPR e-mail: **charlesbentleypro+rgpd@gmail.com**
- Postal address: **Buc 78530, France**

2. Categories of data processed

Category	Data	Source	Retention period
Discord identifiers	user_id, guild_id, channel_id (numeric)	Discord	As long as the user/server remains active
Usage counters	Credits consumed (lifetime / monthly)	Bot	24 months after last use
Audit logs	Date, channel, summary size, license tier	Bot	12 months
Tile cache (anonymized)	Partial 3-hour summaries, without usernames	Bot	7 days
Tile cache (real names)	Partial summaries containing Discord usernames, only if the server admin has enabled the option	Bot	24 hours (reduced TTL)
Final cache	Complete summaries served	Bot	1 hour
Discord display_names	Only if the admin has enabled use_real_names AND the member has not opted out via /optout option 1	Discord	Present in the tile cache (24h max)
Opt-out preferences	4 flags + scope (server or global)	Bot	As long as the user remains active
Licenses	Tier, dates, Discord entitlement identifiers	Discord Monetization	Duration + 12 months
Bot lifecycle	Invitation / removal date per server	Bot	30 days after removal

Important: the **Discord messages** transmitted for summary generation are **never stored** by the Operator. They are transmitted to OpenAI for the duration of the processing, then purged. Only the generated summaries (synthetic texts) may be cached temporarily (see table).

3. Purposes and legal bases

Purpose	GDPR legal basis
On-demand summary generation	Performance of the contract (Article 6.1.b)
Credit counting and billing	Performance of the contract (Article 6.1.b)
Caching to reduce costs	Legitimate interest (Article 6.1.f)
Audit logs and abuse prevention	Legitimate interest (Article 6.1.f)
Compliance with legal obligations	Legal obligation (Article 6.1.c)

4. Processors and transfers

Processor	Role	Location	Safeguards
OpenAI, L.L.C.	Summary generation (gpt-4o-mini)	United States	EU-US Standard Contractual Clauses, OpenAI DPA, store=false (no persistence or retraining)
Discord Inc.	Platform and payments	United States	SCC, EU-US Data Privacy Framework

Sending messages to OpenAI is necessary for the execution of the service. Before transmission, the messages are **sanitized**: emails, phone numbers, URLs, Discord mentions and detectable secrets are replaced with markers [email], [phone], [link], @member, [secret]. The participants' identifiers are **anonymized** as Member 1, Member 2, etc. — the AI never sees the real usernames.

5. Your rights

In accordance with Articles 15 to 22 of the GDPR, you have the following rights:

Right of access (Article 15)

Upon written request to **charlesbentleypro+rgpd@gmail.com**, you will receive within 30 days a JSON copy of all data stored about you.

Right to erasure / right to be forgotten (Article 17)

Discord command **/optout** -> check "Fully exclude my messages from AI processing" + select the scope.

Upon written request, complete deletion of all data (usage counters, audit logs, preferences) within 30 days.

Right to object (Article 21)

Discord command **/optout**: 4 levels available, of which only level 4 is active in v1 (the others are planned for v2). Choice of scope (this server only / all servers).

Right to portability (Article 20)

Upon written request: structured JSON copy of your data within 30 days.

Right of rectification (Article 16)

Upon written request to **charlesbentleypro+rgpd@gmail.com**.

Right to lodge a complaint

You may file a complaint with the **CNIL** (the French data protection authority, 3 Place de Fontenoy, 75007 Paris) or with the supervisory authority of your country of residence in the EU.

6. Security

The Operator implements:

- encryption of communications (TLS 1.2+) with Discord and OpenAI;
- storage of the OpenAI API key as an environment variable, never in the source code or in a public git repository;
- access to the database restricted to the Operator;
- **strict XML encapsulation** of user messages to prevent prompt injection attacks (any instruction found in `<transcript>` is ignored by the AI);
- **automatic detection** of suspicious output with an alert in the configured admin log channel;
- audit logs to detect abuse;
- OpenAI parameter `store=false`: no persistence or retraining.

7. Auto-cleanup and retention periods

An automatic task runs every 6 hours and purges:

- cache tiles older than 7 days;
- final cached summaries older than 1 hour;
- usage counters older than 24 months;
- audit logs older than 12 months.

When the bot is removed from a server, the associated data is retained for **30 days** in case it is re-invited, then purged automatically.

8. Minors

Discord requires a minimum age of 13 (16 in some EU countries). The Operator does not knowingly process data of minors below this age. In case of a report, the data is deleted without delay.

9. Breach notification

In the event of a breach likely to result in a risk to the rights and freedoms of individuals, the Operator notifies the CNIL within 72 hours (Article 33) and informs the data subjects if the risk is high (Article 34).

10. Changes

This policy may be modified. Substantial changes are notified 15 days before they take effect via the support Discord server and the bot's public repository.

11. De-anonymization and database isolation

11.1. Anonymization by default

By default, the AI receives messages attributed to Member 1, Member 2, etc. No Discord username is transmitted. This is the **privacy by design** configuration within the meaning of Article 25 of the GDPR.

11.2. Real names mode (admin opt-in)

The administrator of a server may enable the use of Discord usernames in summaries. This activation:

- requires an explicit confirmation (typing "ACTIVER")
- triggers an **automatic announcement** in the configured log channel
- **reduces the cache duration** of summaries containing usernames to 24 hours
- is logged in the database with the timestamp and identifier of the admin who enabled it

11.3. Individual opposition

Any member may object to the use of their username via `/optout` option 1 (*Hide my name in AI summaries*), even if the admin has enabled real names. The opposition applies to the chosen scope (this server or all servers).

The opposition via `/optout` option 4 (*Fully exclude*) replaces the member's messages with [OPT-OUT USER N] in all summaries, regardless of the other settings.

11.4. Database isolation

The Operator guarantees that:

- **server administrators have no access to the bot's database;**
- the Discord commands (`/credits`, `/setup`, `/optout`, etc.) only give access to the server configuration or the personal data of the member invoking the command;
- no Discord command allows an admin to consult the usage counters, summaries, or audit logs of another member;
- only the Operator (data controller) has direct technical access to the database, in strict compliance with Article 32 of the GDPR.

This isolation is a contractual commitment of the Operator. The technical processors (OpenAI, Discord) only receive the data strictly necessary for the execution of the service.

12. Contact and exercise of rights

- Dedicated GDPR e-mail: **charlesbentleypro+rgpd@gmail.com**
- Support Discord server: **[link TBD]**

The Operator commits to respond within 30 days.
