Welcome to Summary AI

Summary AI is a Discord bot that **summarizes your conversations** using artificial intelligence. With a single command, catch up on what was said in a channel while you were away — without scrolling through hundreds of messages.

In 30 seconds

Step	Action
1	Invite the bot to the server (link provided at purchase)
2	An admin runs /setup to enable the allowed channels
3	Test with /summary in an allowed channel
4	Enjoy the Free tier (3 lifetime credits) then upgrade when ready

1. Available commands

/summary — the main command

Run /summary in an allowed channel. An interactive menu opens:

- **Duration:** choose a preset window (1h, 6h, 12h, 24h, 48h, 72h) or click “**Specific date...**” to enter an exact period in the format YYYY-MM-DD HH:MM.
- **Language:** French or English. The summary will be in this language, regardless of the original language of the messages.
- **Style:** Fast (default). Other styles will arrive in v2.

With each change, the credit estimate is updated. When you are ready, click “**Run summary**”.

The summary contains: - A general summary in 3-5 sentences - The topics discussed (bullets) - The decisions / actions taken (or “none”) - The open questions (or “none”)

Message footer: number of messages processed, license tier, credits debited, cache status.

/credits — see your remaining credits

Displays a visual gauge of your credits:

- **For you:** your personal balance (free tier or personal subscription).
- **For the server** (admin only, Manage Guild permission): the server’s shared balance.

/optout — privacy preferences

Privacy settings menu with 4 levels + scope:

Option	Effect in v1
1. Hide my name in AI summaries	ACTIVE: if the admin has enabled real names in /setup, your Discord username is still replaced with Member N for you. If the admin has not enabled the option, you are already anonymized by default, so the option has no additional effect.
2. Do not use my messages for long-term memory	(v2 — inactive, planned for the long-term memory feature)
3. Do not use my messages for analytics	(v2 — inactive, planned for the server analytics feature)
4. Fully exclude my messages from AI processing	ACTIVE: your messages are replaced with [OPT-OUT USER N] in all summaries, regardless of the other settings

Scope: “This server only” or “All servers where the bot is present”.

/license info and /license redeem

- **/license info:** shows your personal tier + the server tier + the prices.
- **/license redeem code:<CODE>**: activates a license with a code (early adopters / partners).

/help and /support

- **/help**: list of all commands.
- **/support**: links to the support server, e-mails (general + GDPR), ToS, Privacy Policy.

/setup (admin only, Manage Guild)

Configuration panel:

- **Server context**: description of the server (1,000 characters max) sent to the AI so it understands the jargon, the game's universe, etc.
- **Channels & categories**: selection of the channels where /summary is allowed. Each channel can have its own description (300 characters max).
- **Real names**: enables Discord usernames display in summaries (see section 4 below).
- **Testers** (Server Free only): selection of the 5 people authorized to use the bot. The admin can change a tester as long as they have not started their first summary.
- **Custom admin prompt** (Server Ultra only): personalized instructions for the AI to follow (added after the non-negotiable safety rules).

2. Credit system and pricing

2.1. How credits are consumed

Each /summary consumes **1 to 10 credits** depending on the amount of text analyzed by the AI:

Tokens consumed	Credits debited
< 8,000	1 credit
8,000 - 25,000	2 credits
25,000 - 60,000	5 credits
60,000 - 120,000	10 credits
> 120,000	refused (window too large)

The system is **hybrid**: before each summary, an estimate is made and held. After the call to the AI, the actual cost is computed and the difference is **automatically refunded**.

2.2. Pricing (USD, Discord converts based on your country)

Personal tiers

Tier	Price	Quota	Max lookback
Free	\$0	3 lifetime credits / server	24h
Personal Premium	\$2.99/month	50 credits/month	48h
Personal Ultra	\$9.99/month	200 credits/month	72h

Server tiers

Tier	Price	Shared quota	Channels	Individual cap
Server Free	\$0	25 lifetime credits	1	5 named testers
Server Starter	\$9.99/month	250 credits/month	3	configurable (default 30)
Server Premium	\$24.99/month	700 credits/month	10	configurable (default 50)
Server Ultra	\$59.99/month	1,600 credits/month	unlimited	configurable (default 200)

Server Ultra also includes the **custom admin prompt**: a text the admin can add to personalize the way the AI summarizes (style, tone, particular focus).

2.3. Authorization logic

When you run /summary, the bot evaluates in this order:

1. Does the server have an active license? -> consumes the server quota (+ individual cap if configured).
2. Otherwise, do you have an active personal license? -> consumes your personal quota.

3. Otherwise, do you have any free credits left on this server? -> consumes lifetime free credits.
4. Otherwise, refusal with an upgrade proposal.

3. Cache and cooldown

3.1. Tile cache (7 days)

To avoid recomputing the same content 50 times, Summary AI splits time into **aligned 3-hour tiles** (00h-03h, 03h-06h, 06h-09h, etc. in UTC). Each tile is summarized **only once** then stored for 7 days.

If you request `/summary 24h`, the bot will: 1. Retrieve the 7-8 covering tiles (cache hit if already computed) 2. Compute the edge fragments (the hours that do not align exactly with a tile) 3. Merge it all into a coherent summary

Expected savings: 50-70% of AI cost on active servers.

3.2. Final summary cache (1 hour)

When a summary is generated, it is retained for **1 hour**. If you request exactly the same summary within that hour:

- **If you are within your 60 min cooldown:** the summary is served **free of charge** (0 credit debited).
- **If you are out of cooldown:** the summary is served at the stored cost.

3.3. 60-minute cooldown per channel

You can only run one `/summary` every 60 minutes **per channel** (but you can run another `/summary` immediately in a different channel). The cooldown protects against abuse.

4. Real names (admin option)

4.1. Default mode: anonymization

By default, Summary AI systematically **anonymizes** members in the summaries. You appear as Member 1, Member 2, etc. The AI never sees your real Discord username.

Typical anonymized summary:

“One member indicates they are already committed to 1900 and have taken a day off. Another says they may be available for a future Vault, but an unplanned surgery could prevent them from attending.”

4.2. Real names activation by admin

The administrator of a server can enable the use of Discord usernames in /setup -> **Enable real names** button. An explicit confirmation is required (typing the word ACTIVER).

Once enabled:

- Summaries display your **Discord username** instead of Member N
- An **automatic announcement** is sent to the configured log channel to inform the members
- The **cache duration** of summaries containing usernames is reduced to **24 hours** (instead of 7 days)

Typical de-anonymized summary:

*“**Alice** indicates she is already committed to 1900 and has taken a day off. **Bob** says he may be available, but an unplanned surgery could prevent him from attending.”*

4.3. How to stay anonymous even if the admin has enabled real names

Use /optout and check **box 1: Hide my name in AI summaries**. Choose the scope (“this server” or “all servers”). You will be displayed as Member N in all future summaries, regardless of the server option.

4.4. Access to stored data

Server admins have no access to the bot’s database. Discord commands never give access to other members’ summaries or counters. Only the service operator has direct technical access to the database, in strict compliance with the GDPR (Article 32).

5. Privacy and GDPR

5.1. What is NOT stored

- **Discord messages** sent to OpenAI: transmitted for the summary, never persisted by the Operator.
- **No payment information:** Discord handles everything.

5.2. What is stored

- Discord identifiers (numeric)
- Usage counters (credits consumed)
- Audit logs (date, channel, summary size)
- Tile cache (7 days) and final summary cache (1 hour)
- Opt-out preferences

5.3. Your GDPR rights

Right	Command / action
Access	E-mail to charlesbentleypro+rgpd@gmail.com
Erasure	/optout level 4 + e-mail for complete deletion
Objection	/optout
Portability	GDPR e-mail
Rectification	GDPR e-mail

5.4. Security

- TLS 1.2+ for all communications
- **Automatic sanitization**: emails, phone numbers, URLs, API secrets are replaced with markers before transmission to OpenAI
- **Anonymization**: your messages are attributed to Member 1, Member 2... — the AI never sees your real username
- **Anti prompt-injection**: strict XML encapsulation + hardened system prompts
- Automatic detection of suspicious output with admin alert

6. Summary limitations

Summary AI generates summaries via an AI (gpt-4o-mini). Like any AI, it may:

- Misinterpret sarcasm or an internal reference
- Miss an important detail
- Synthesize imperfectly if the conversation is very long

The bot does not replace human reading of critical conversations (moderation, decision-making, sanctions, contractual negotiations, etc.).

7. Troubleshooting

Symptom	Likely cause	Solution
"You are not in the list of testers"	Server Free + you are not authorized	Ask the admin to add you via /setup
"Monthly quota reached"	Server or personal tier exhausted	Wait for the end of the month or upgrade
"Your lifetime free quota is exhausted"	3 credits already consumed on this server	Subscribe to a personal tier or a server tier
"Cooldown active: try again in X min"	You have already run a /summary on this channel recently	Wait, or test on another channel
"This channel is not configured for /summary"	Channel not whitelisted	Ask the admin to add it via /setup
"Volume too large"	Requested window > 120,000 tokens	Reduce the time window
The bot does not respond	OPENAI_API_KEY not configured on the operator side	Contact the bot operator
